

Valued Customers,

As government agencies, researchers and medical professionals around the world struggle to address the evolving threat of the coronavirus, it appears that it could be some time before we all return to business as usual. Wisconsin Precision Casting Corporation is fortunate to share an update that we hope provides a small measure of certainty to you during this uncertain time.

Wisconsin Precision supplies multiple "Critical Infrastructure Industries" as defined by the U.S. Department of Homeland Security, including medical, energy, defense, food processing and several other essential industries. Companies in such industries are asked to maintain normal work schedules during the crisis to ensure that the U.S. remains safe and secure. As a result, both Wisconsin Precision facilities are maintaining operations and we do not anticipate disruptions in production or shipping.

Understanding that greatest asset and most precious resource at Wisconsin Precision Casting is our people, we have implemented new measures to ensure the safety of our employees. With guidance from the CDC, we have communicated the need for social distancing and hand washing, eliminated in-person meetings, enhanced our cleaning procedures and required any employees with symptoms to stay at home and self-quarantine. We have also maintained an open line of communication with our supply base to maintain a consistent flow of product in to and out of our facilities.

**WE WILL GET THROUGH THIS TOGETHER!** Wisconsin Precision is here to support you. If there are any component requirements you have please contact us. Aside from our normal production of investment castings we can fill any supply gaps via our Rapid prototyping process. Regardless of the current process or supplier, we can use 3D printing to produce patterns from which production ready parts are cast. Given your 3D model we can produce quantities of parts in 10-30 business days depending on secondary operations.

Please contact us for any critical component requirements.

Thank You and Stay Healthy!
